Defining the Cones that Define Control. | Proving the Transition. Protecting the Future. | Assurance You Can Prove. Integrity You Can Trust.

BUILDING THE ASSURANCE ARCHITECTURE FOR RESPONSIBLE AGENTIC AI
STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

THE AGENTIC AI $T_4 \rightarrow T_5$ TRANSITION INTEGRITY CONE FRAMEWORK™

V2.0 — Enterprise Assurance, Reconciliation & Independent Accountability

 Defining the Cones that Define Control.
  Proving the Transition. Protecting the Future.
  Assurance You Can Prove. Integrity You Can Trust.

1. PURPOSE

BUILDING THE ASSURANCE ARCHITECTURE FOR RESPONSIBLE AGENTIC AI
STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

The Agentic AI $T_4 \rightarrow T_5$ Transition Integrity Cone Framework™ establishes an assurance architecture for determining whether a consequential transition from an observed/decided state (T_4) to an authoritative execution/enforcement state (T_5) is:

Authorized → Controlled → Evidenced → Reconciled → Independently Assured → Accountable

Its central proposition is:

T_4 evidence + T_5 evidence $\neq$ proof of $T_4 \rightarrow T_5$ transition integrity.

Therefore, the transition itself is treated as an independent assurance object.

2. THE CONE ARCHITECTURE

The Cone progressively narrows from multiple enterprise functions and evidence sources toward one accountable transition conclusion:

ENTERPRISE CONTROL ENVIRONMENT

ARCHITECTURE — Technical Path

GOVERNANCE — Authority & Decision Rights

ASSURANCE — Independent Testing

FORENSICS — Evidence & Reconstruction

T₄→T₅ ASSURANCE BOUNDARY

Reconciliation + Independent Challenge

ACCOUNTABLE AUTHORITY

Accept / Reject

TRANSITION INTEGRITY CONCLUSION

ADNAN SHAMIM

CREATOR OF

- THE I-A-N-E-T-F CONE™
- THE AGENTIC AI AUTHORITY CONE™
- THE AGENTIC AI T₄→T₅ TRANSITION INTEGRITY CONE™

FOUNDER OF THE FIRST AGENTIC AI AUDIT ECOSYSTEM™

Independent • Evidence-Based Assurance • Governance • Forensics for Agentic AI

Defining the Cones. Then Defining Control.

Proving the Transition. Protecting the Future.

Assurance You Can Prove. Integrity You Can Trust.

3. THE FOUR ASSURANCE FUNCTIONS

① ARCHITECTURE — *Can the transition technically occur?*

STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

Defines and evidences:

- Control architecture
- Execution pathways
- System dependencies
- Trust boundaries
- Alternate, parallel and asynchronous paths
- Fail-safe / fail-closed mechanisms

② GOVERNANCE — *Is the transition authorized?*

Defines and evidences:

- Intent
- Authority
- Decision rights
- Approval conditions
- Delegations
- Standing authorizations
- Revocation authority
- Accountability

③ ASSURANCE — *Can the conclusion be independently tested?*

Establishes:

- Control objectives
- Evidence requirements
- Independent testing
- Challenge criteria
- Exception criteria
- Acceptance/rejection criteria

ADNAN SHAMIM

CREATOR OF

- THE FUTURIST'S STRATEGY CONE™
- THE I-A-N-E-T-F CONE™
- THE AGENTIC AI AUTHORITY CONE™
- THE AGENTIC AI T₄→T₅ TRANSITION INTEGRITY CONE™

FOUNDER OF THE FIRST AGENTIC AI AUDIT ECOSYSTEM™

Independent • Evidence-Based Assurance • Governance • Forensics for Agentic AI

Defining the Cones that Define Control.

Proving the Transition. Protecting the Future.

Assurance You Can Prove. Integrity You Can Trust.

BUILDING THE ASSURANCE ARCHITECTURE FOR RESPONSIBLE AGENTIC AI

STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

④ FORENSICS — *Can the transition be reconstructed?*

Preserves and reconstructs:

- Immutable event records
- Timestamped sequence
- Identity attribution
- Authorization state
- Execution state
- Intervention/revocation events

- Post-event reconstruction

4. THE $T_4 \rightarrow T_5$ ASSURANCE BOUNDARY

The $T_4 \rightarrow T_5$ Assurance Boundary™ is the controlled reconciliation layer across the four functions.

It must establish, within the defined assurance scope:

T_4 — OBSERVATION / DECISION

↓

① AUTHORITY VALIDATION

Was the relevant authority valid at the applicable commit point?

↓

② TRANSITION CONTROL

Were the required controls active and effective?

↓

③ PATH INTEGRITY

Were relevant execution paths and residual authorities accounted for?

↓

④ INTERVENTION / REVOCATION EFFECTIVENESS

If intervention occurred, did it become operationally effective?

↓

⑤ EVIDENCE RECONCILIATION

Do independent evidence sources establish a consistent transition sequence?

↓

T_5 — AUTHORITATIVE EXECUTION / ENFORCEMENT

5. THE FIVE MANDATORY INTEGRITY QUESTIONS

For every consequential transition:

ADNAN SHAMIM

CREATOR OF

- THE FUTURIST'S STRATEGY CONE™
- THE I-A-N-E-T-F CONE™
- THE AGENTIC AI AUTHORITY CONE™
- THE AGENTIC AI $T_4 \rightarrow T_5$ TRANSITION INTEGRITY CONE™

FOUNDER OF THE FIRST AGENTIC AI AUDIT ECOSYSTEM™

Independent • Evidence-Based Assurance • Governance • Forensics for Agentic AI

Defining the Cones that Define Control. Proving the Transition. Protecting the Future. Assurance You Can Prove. Integrity You Can Trust.

BUILDING THE ASSURANCE ARCHITECTURE FOR RESPONSIBLE AGENTIC AI

STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

1. AUTHORITY

Was the action authorized at the relevant point?

2. COMMIT

What exactly crossed the execution boundary?

3. PATH

Were all relevant execution paths accounted for?

4. EFFECT

Did the action become capable of producing, or produce, a consequential effect?

5. EVIDENCE

Can an independent party establish the relevant transition sequence?

6. EVIDENCE INTEGRITY STANDARD

Transition evidence must be:

Identifiable → Attributable → Time-bound → Integrity-Protected → Reconciled → Independently Testable

A stop or revocation command demonstrates that an intervention was issued.

It does not, by itself, demonstrate that the intervention became operationally effective.

Therefore:

 Defining the Cones that Define Control
COMMAND ≠ EFFECTIVENESS

 Proving the Transition. Protecting the Future.

 Assurance You Can Prove. Integrity You Can Trust.

And:

BUILDING THE ASSURANCE ARCHITECTURE FOR RESPONSIBLE AGENTIC AI
STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

ENDPOINT INTEGRITY ≠ TRANSITION INTEGRITY

7. ACCOUNTABILITY & INDEPENDENCE

Every consequential transition must have explicitly assigned:

Control Owner → Evidence Owner → Independent Assurer → Accountable Authority

The accountable authority must have defined standing to:

ACCEPT

Transition Integrity Demonstrated

or

REJECT

Transition Integrity Unproven

The authority to accept or reject the conclusion must not arise merely from designing, implementing, operating, or controlling the execution path being assessed.

CONTROL OWNERSHIP ≠ INDEPENDENT ASSURANCE

EVIDENCE OWNERSHIP ≠ CONCLUSION AUTHORITY

ADNAN SHAMIM

8. ACCEPTANCE / REJECTION GATE

ACCEPT — TRANSITION INTEGRITY DEMONSTRATED

Only where the required conditions are:

Independently Evidenced + Reconciled + Within Defined Assurance Scope

REJECT — TRANSITION INTEGRITY UNPROVEN

Where evidence is:

- Insufficient
- Contradictory
- Incomplete
- Unreconciled
- Incapable of establishing the required conditions

AGENCY CONE™

AGENTIC AI AUTHORITY CONE™

THE AGENTIC AI T₄→T₅ TRANSITION INTEGRITY CONE™

FOUNDER OF THE FIRST AGENTIC AI AUDIT ECOSYSTEM™

Independent • Evidence-Based Assurance • Governance • Forensics for Agentic AI

Defining the Cones
Proving the Transition.
Assurance You Can Prove.

Integrity You Can Trust.

STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

Failure to establish transition integrity is not equivalent to establishing that no consequential act occurred.

9. CORE DOCTRINES

CAPABILITY ≠ AUTHORITY ≠ EXECUTION ≠ EFFECT

T₄ EVIDENCE + T₅ EVIDENCE ≠ PROOF OF T₄→T₅ TRANSITION INTEGRITY

A CONTROL CAN OPERATE AS DESIGNED WHILE THE TRANSITION REMAINS UNPROVEN.

A STOP COMMAND DOES NOT EQUAL DEMONSTRATED PREVENTION.

EVIDENCE OWNERSHIP DOES NOT EQUAL CONCLUSION AUTHORITY.

CONTROL OWNERSHIP DOES NOT EQUAL INDEPENDENT ASSURANCE.

TRUSTWORTHY ENDPOINTS DO NOT, BY THEMSELVES, ESTABLISH A TRUSTWORTHY TRANSITION.

10. GOVERNING ASSURANCE TEST

Can an independent, accountable authority establish—using reconciled evidence and within the defined assurance scope—that the consequential transition from T_4 to T_5 occurred through an authorized and controlled execution path, and that no unaccounted execution path or residual authority capable of producing the relevant consequential effect remained within that scope?

YES

TRANSITION INTEGRITY DEMONSTRATED

NO

TRANSITION INTEGRITY UNPROVEN

11. THE FOUR-FUNCTION → BOUNDARY → AUTHORITY MODEL

FOUR FUNCTIONS PRODUCE AND PRESERVE EVIDENCE

Architecture

Defining the Cones
that Define Control.

Proving the Transition.
Protecting the Future.

Assurance You Can Prove.
Integrity You Can Trust.

Defines the technical path.

Governance

Defines authority and decision rights.

Assurance

Independently tests the conclusion.

Forensics

Preserves and reconstructs what occurred.

$T_4 \rightarrow T_5$ ASSURANCE BOUNDARY

Connects and reconciles the evidence across the seams.

INDEPENDENT CHALLENGE

Tests whether the evidence actually supports the transition conclusion.

ACCOUNTABLE AUTHORITY

Accepts or rejects the conclusion.

12. FUNDAMENTAL PRINCIPLE

ADNAN SHAMIM

The **Agentic AI $T_4 \rightarrow T_5$ Transition Integrity Cone Framework™** does **not** replace Architecture, Governance, Assurance, or Forensics.

It establishes the **assurance boundary across their seams** so that evidence can be:

Connected → Reconciled → Independently Challenged → Converted into an Accountable Conclusion

The objective is not to claim that nothing could ever happen.

The objective is to establish, **within a defined assurance scope**, whether the consequential transition was:

Authorized → Controlled → Traceable → Independently Reconciled → Demonstrably Effective

13. FINAL CONE DOCTRINE

BUILDING THE ASSURANCE ARCHITECTURE FOR RESPONSIBLE AGENTIC AI

STRATEGY • AUTHORITY • ASSURANCE • ACCOUNTABILITY

FOUR FUNCTIONS PRODUCE AND PRESERVE EVIDENCE.

THE $T_4 \rightarrow T_5$ BOUNDARY RECONCILES THE CONNECTIONS.

INDEPENDENT ASSURANCE CHALLENGES THE CONCLUSION.

ACCOUNTABLE AUTHORITY ACCEPTS OR REJECTS IT.

THE AGENTIC AI $T_4 \rightarrow T_5$ TRANSITION INTEGRITY CONE FRAMEWORK™

From multiple assurance functions → through one transition boundary → to one independently defensible, accountable conclusion.
